Passo a Passo Criação de CRUD com MVC 5

Sumário

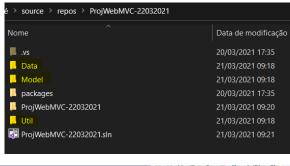

Criar um projeto Web ASP.NET	2
Importar os projetos Data, Model e Util Criados a aula passada, exemplo:	2
Estrutura do projeto:	3
Criar um novo Controller:	4
Implementar Controller Dog:	5
Criar as Views:	7
Configurar um item de menu:	13
Validação:	15

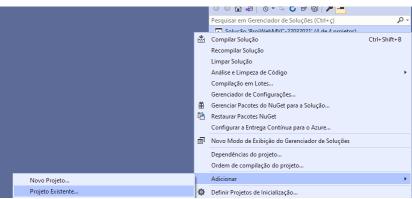

Criar um projeto Web ASP.NET

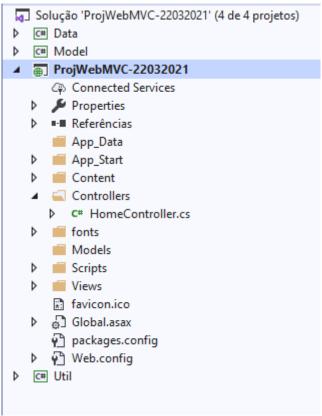

Importar os projetos Data, Model e Util Criados a aula passada, exemplo:

a. Neste passo é possível associar diretamente o projeto da aula passada, contudo para organizar melhor a solução, vamos fazer a cópia dos 3 projetos gerados na aula anterior no diretório do projeto MVC (atual) e após esse procedimento é só adicionar os projetos conforme exemplo a seguir:

Estrutura do projeto:

Neste projeto temos alguns diretórios principais:

App_Start - > Configuração da Rota da aplicação.

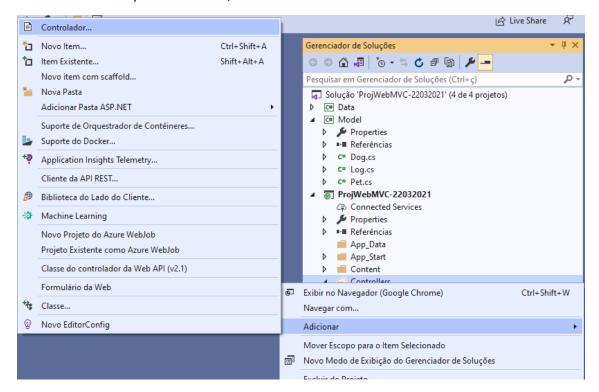

Controllers -> Controle da página.

Views -> Páginas da aplicação.

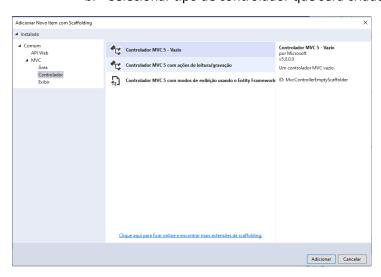

Model -> Modelo.

Criar um novo Controller:

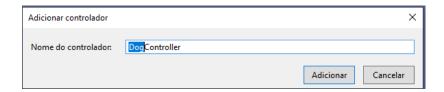

a. Na pasta controller, clicar com o botão direto do mouse:

b. Selecionar tipo de controlador que será criado (Vazio):

c. E Incluir um nome: "Dog"

d. Controlador criado:

```
ProjWebMVC-22032021
                                                                                                                                              using System.Collections.Generic;
                                                                                                                                              Solução 'ProjWebMVC-22032021' (4
               using System.Linq;
                                                                                                                                              Data

Implementar Controller Dog:

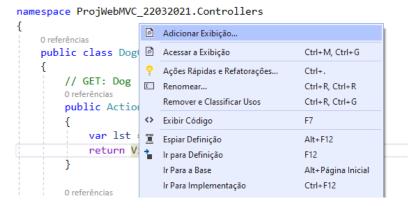

```
9
     pnamespace ProjWebMVC_22032021.Controllers
10
11
           public class DogController : Controller
13
               // GET: Dog
               public ActionResult Index()
14
15
                   var lst = this.Crud().Select();
16
17
                   return View(lst);
18
19
               public ActionResult Create()
20
21
                   return View();
23
               //Método de envio dos dados
27
               // Evitar que se falsifique o envio de dados para o servidor. Recebe apenas requisições do controlador
28
               [ValidateAntiForgeryToken]
29
               public ActionResult Create(Dog dog)
31
                   if (ModelState.IsValid)
                       this.Crud().Insert(dog);
                       return RedirectToAction("Index");
35
36
                   return View(dog);
37
38
```
